

LAB-1 Install Terraform –

Step1–

Installing Terraform on MacOs using brew–

```
pulkitkathayat@Pulkits-Laptop ~ % brew install terraform
Running `brew update --auto-update`...
==> Homebrew collects anonymous analytics.
Read the analytics documentation (and how to opt-out) here:
https://docs.brew.sh/Analytics
No analytics have been recorded yet (nor will be during this `brew` run).

==> Homebrew is run entirely by unpaid volunteers. Please consider donating:
https://github.com/Homebrew/brew#donations

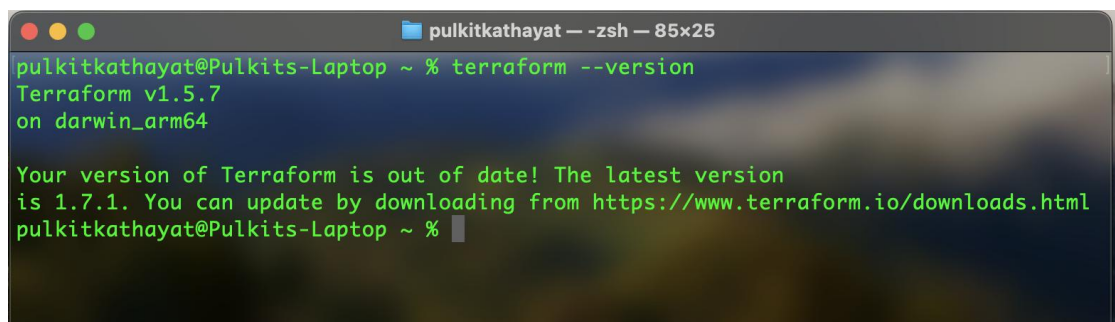

==> Auto-updated Homebrew!
Updated 1 tap (homebrew/core).
==> New Formulae
openjph

You have 1 outdated formula installed.

==> Downloading https://ghcr.io/v2/homebrew/core/terraform/manifests/1.5.7
##### 100.0%
==> Fetching terraform
==> Downloading https://ghcr.io/v2/homebrew/core/terraform/blobs/sha256:f43afa7c6970e
##### 100.0%
==> Pouring terraform--1.5.7.arm64_sonoma.bottle.tar.gz
🍺 /opt/homebrew/Cellar/terraform/1.5.7: 6 files, 69.7MB
==> Running `brew cleanup terraform`...
```

Step2–

Checking the version of Terraform installed –

```
pulkitkathayat@Pulkits-Laptop ~ % terraform --version
Terraform v1.5.7
on darwin_arm64

Your version of Terraform is out of date! The latest version
is 1.7.1. You can update by downloading from https://www.terraform.io/downloads.html
pulkitkathayat@Pulkits-Laptop ~ %
```
